

Artificial Volatility Forecast Outperformance of Unadjusted GARCH Forecast

Each Square: Outperformance Proportion and (Simulation Count)

Number of Extra Measurement Days = 0

Artificial Volatility Forecast Outperformance of Unadjusted GARCH Forecast

Each Square: Outperformance Proportion and (Simulation Count)

Number of Extra Measurement Days = 1

Artificial Volatility Forecast Outperformance of Unadjusted GARCH Forecast

Each Square: Outperformance Proportion and (Simulation Count)

Number of Extra Measurement Days = 2

Artificial Volatility Forecast Outperformance of Unadjusted GARCH Forecast

Each Square: Outperformance Proportion and (Simulation Count)

Number of Extra Measurement Days = 3

Artificial Volatility Forecast Outperformance of Unadjusted GARCH Forecast

Each Square: Outperformance Proportion and (Simulation Count)

Number of Extra Measurement Days = 4
